EXPERIENCE

CAP Associate Amazon	Jun 2023 - Present
---------------------------------------	--------------------

- Identify and eliminate concession abuse while preserving customer trust.
- Collaborating with cross-functional teams to investigate and resolve cases of potential concession abuse.

PROJECTS

HR Analytics Dashboard : Created a data-driven HR Analytics dashboard in Power BI, enhancing workforce insights and decision-making. Transformed and visualized data, enabling streamlined HR operations and talent development strategies. ([See it here](#))

Amazon Global Sales Dashboard : Led the development of a real-time Global Sales Dashboard that offers dynamic insights into sales performance. Using pie and donut charts, I analyzed sales distribution among Home Office, Consumer, and Corporate segments across various countries. I identified top customers and products by profit to optimize strategies, while bar charts helped visualize profit and guide resource allocation. The dashboard includes key metrics, such as profit, quantities sold, delivery time, and returns, for operational optimization. A dynamic world map with bubbles showcased our global presence, and a time slicer enabled year-wise trend analysis. All data is presented in INR for financial consistency. ([See it here](#))

Ecommerce Sales Dashboard : Designed a dynamic Power BI sales dashboard with tailored parameters, enabling detailed analysis of online sales data. Utilized diverse visualizations, including bars, pies, donuts, lines, and areas, along with customized filters and slicers for deeper insights. Implemented features for quarter-based sales measurement and state-level filtering, enhancing strategic decision support. ([See it here](#))
